1 Readable Circuit

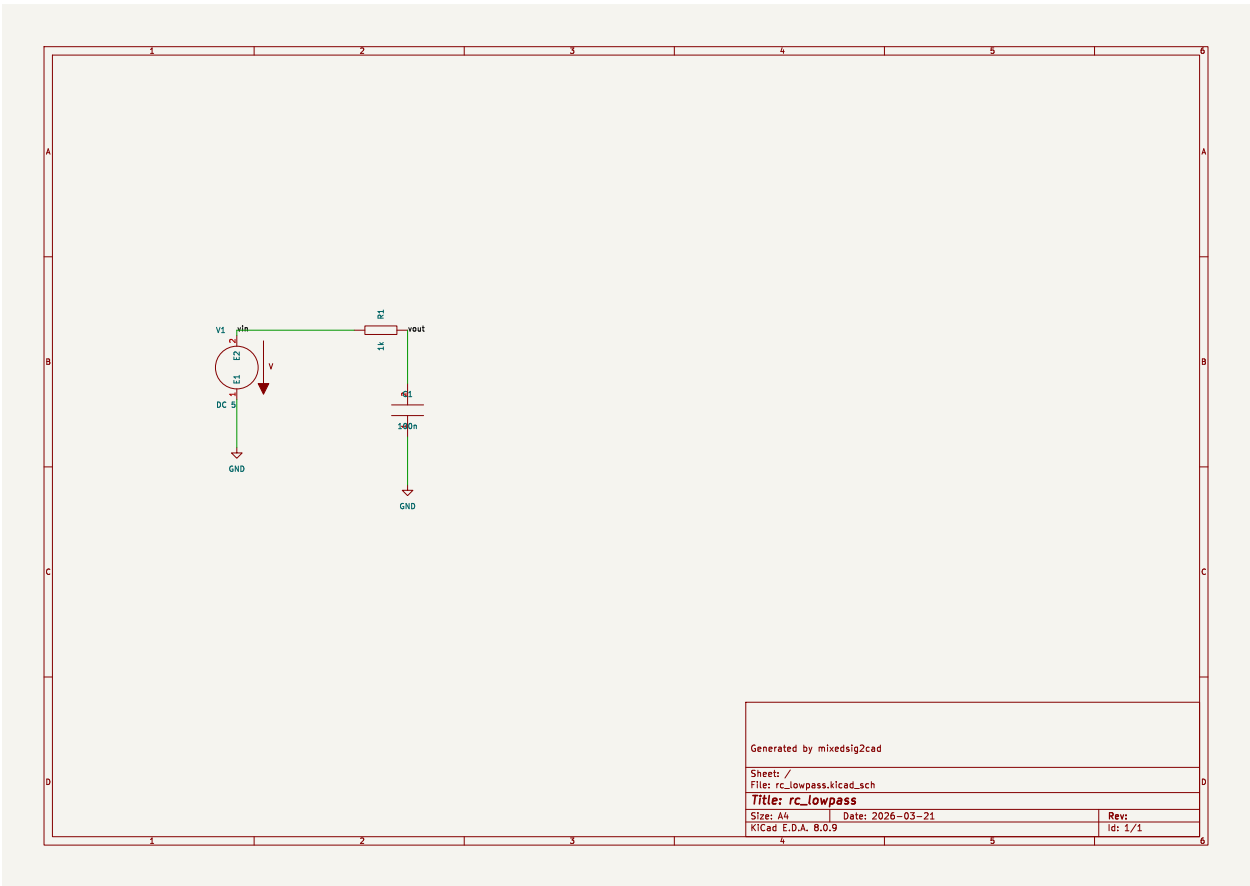

1.1 General Readable Circuit

1.2 Specific Readable Circuit

2 KiCad SVG Reference

3 Reference Summary

Ref	Kind	Value / Model	Nodes
V1	V	DC 5	vin, 0
R1	R	1k	vin, vout
C1	C	100n	vout, 0

Model Statements No model statements defined.

Analyses

- op
- ac dec 20 10 1e6

4 Design Notes

Overview

This generated example captures the rc lowpass circuit using voltage sources, resistors, capacitors.

Operating Notes

- Primary simulation commands: op, ac dec 20 10 1e6.
- Component count: 3 active entries in the shared CircuitSpec.
- Named nets to review during edits: vin, vout.

Design Notes To Edit

- Replace these starter notes with intended operating limits, tuning guidance, and simulation expectations.
- Record any KiCad-specific layout conventions that should stay aligned with the generated schematic.
- Add usage notes for the ngspice analyses that matter for this example.
